

The CrowdFunding Contract - Planning and Design

- The **Admin** will start a campaign for **CrowdFunding** with a specific monetary **goal** and **deadline**.
- **Contributors** will contribute to that project by sending ETH.
- The admin has to create a **Spending Request** to spend money for the campaign.
- Once the spending request was created, the Contributors can start **voting** for that specific Spending Request.
- If more than 50% of the total contributors voted for that request, then the admin would have the permission to spend the amount specified in the spending request.
- **The power is moved from the campaign's admin to those that donated money.**
- The contributors can **request a refund** if the monetary goal was not reached within the deadline.
